TITLE: New stage in the development of Soviet electric power engineering

SOURCE: Energetik, no. 5, 1966, 1-2

TOPIC TAGS: electric power engineering, industrial development, electric power plant, steam turbine, electric power transmission

ABSTRACT: A review of the state of soviet electrical power engineering. It is noted that the second half of the past seven year plan saw the construction of many powerful steam-turbine power plants of 150, 200 and 300 thousand kw; by the beginning of 1966, 116 such installations were in operation, plus 12 steam turbine installations of 1,000,000 kw and over, including the Staro-Beshevskaya regional power station of 1,900,000 kw, the Pribaltiyskaya and Verkhne-Tagil'skaya regional stations of 1,600,000 kw. In the coming five year plan, the main thrust of power construction will be the construction of powerful steam turbine installations, with planned power outputs of 2,400,000 kw and over, including mainly individual power units of 300,000 kw, operating with supercritical steam parameters. Twelve such power units are already in

Card 1/2

L 36479-66

ACC NR: AP6027063

operation. In 1966-70, 68-70 more will be built. Units of 500-800 thousand kw power will also be installed by 1970. Three are to be built in all; also, the two first heat producing units of 250,000 kw capacity are to be built in the current five year plan. The plans for the next five year plan also include the construction of long-distance electric power transmission lines, bringing power from northern Kazakhstan to the central European portion of the USSR. The lines will operate at 750 kv AC and 1,500 kv DC. [JPRS: 36,28]

Author : Vaynberg, M. M.

Title : Hyperboloids and the conditional extremum of certain functionals in Hilbert space

Periodical : Usp. mat. nauk, 9, No 2(60), 105-112, 1954

Abstract : In the investigation of certain problems of the theory of nonlinear operator equations it is necessary to find the sufficient conditions for the existence of the conditional extremum of the functional $\phi(x) = f(Ax)$, where $f(x)$ is a differentiable functional and A is linear operator in a real Hilbert space H . Here the author gives the sufficient conditions for the existence of the conditional extremum of functional $\phi(x)$ relative unbounded manifolds, hyperboloids generated by A . These concepts, to which certain problems of nonlinear analysis reduce, are also connected with the investigations of L. S. Pontryagin, M. G. Kreyn, M. A. Rutman, and I. S. Iokhviodov.

L. I. Ahlfors and M. G. Krein. Spectral theory of
operators in space with indefinite metric. I. Trudy
Matemat. Inst. 5 (1956), 367-432. (Russian)
A Hilbert space H_n with an indefinite inner product is
considered. A basic axiom is the decomposability of H_n
into a direct sum of two subspaces H_+ (n -dimensional)
and H_- (the orthogonal complement of H_+), such that
the inner product is positive definite on H_+ and H_- .
In order to obtain a more general theory, it is assumed
that no subspace of H_n is positive definite, and hence
dimension n is assumed to be

1. 1,2-DIOL IS and KREIN 6.

2. Known representative for linear functional groups
and groups: H_2N , OH , COOH , H_2O , H_2N . Hence the
linear functional groups of species are left-hand and
right-hand, respectively, of isomeric and adjacent to
each other. A variation in the spectrum of a
linear functional group is observed with respect to the
linear functional group spectrum.
3. The linear functional group spectrum is a linear
functional group spectrum. There is a linear
functional group spectrum.
4. The linear functional group spectrum is a linear
functional group spectrum.

TITLE: University Conference on Functional Analysis and its Applications

PERIODICAL: Uspekhi matematicheskikh nauk, 1959, Vol 14, Nr 3,
pp 221 - 226 (USSR)

ABSTRACT: The paper contains a report on the conference on functional analysis and its applications which took place on October 20-25, 1958 in Odessa at the Hydrometeorological Institute. There were 140 participants from 8 republics of the USSR. M.G. Kreyn opened the conference. General lectures were given by G.Ye. Shilov and I.M. Gel'fand (read out by M.I. Grayev). Lectures given by : R.A. Aleksandryan, Yu.M. Berezanskiy, N.I. Vilenkin, M.I. Vishik and L.A. Lyusternik, I.M. Gel'fand and M.I. Grayev, M.I. Grayev, V.A. Il'in, L.V. Kantorovich and G.Sh. TITLE: Calculation of the diamagnetic susceptibility of helium
PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 42,
no. 3, 1962, 820

TEXT: Bethe and Salpeter have pointed out that the value of r^2 for one electron in the He ground state, calculated by the Hartree function, is smaller than the value obtained from recent experiments. It is now shown that this discrepancy cannot be attributed to an inaccurate representation of the wave function. Numerical calculations were carried out with a BESM-2 (BESM-2) computer for the more exact wave function given by Kinoshita. The result was the same as obtained with the Hartree function and it is concluded that the experimental value should be verified. There are 4 non-Soviet references. The two references to English-language publications read as follows: T. Kinoshita. Phys. Rev. 105, 1490, 1957; 115, 366, 1959. J. H. Bartlett. Phys. Rev. 98, 1067, 1955.

TITLE: Effect of anharmonism on the temperature shift in the Mossbauer effect

PERIODICAL: Fizika tverdogo tela, v. 5, no. 4, 1963, 1194 - 1198

TEXT: The temperature shift $D = p^2/2mc^2$ of the γ -line frequency in recoil-free resonance scattering of γ -quanta may be derived with respect to temperature according to the virial theorem in harmonic approximations.

$dD/dT = C_v/2mc^2$ in the case of an ideal crystal. This law is violated in the case of anharmonic vibrations. In the present paper the effects of anharmonism of third and fourth orders on this law is analyzed. p denotes the momentum of the Mossbauer nucleus, m its mass, C_v the lattice specific heat. Estimates of the effect are given for the limiting cases of high temperatures for a three-dimensional crystal, and of low temperatures for (a) a linear chain with interaction between the nearest neighbors and (b) a three-dimensional crystal. In both cases the effects of the limiting

TITLE: Effect of two-level impurity system on the phonon spectrum of a crystal and single-quantum inelastic scattering of neutrons 317 21 44.55

SOURCE: Fizika tverdogo tela, v. 7, no. 5, 1965, 1490-1494

TOPIC TAGS: crystal impurity, impurity level, phonon spectrum, phonon scattering, neutron scattering, line broadening

ABSTRACT: The Feynman-diagram method is used to determine at a temperature $T = 0$ the influence of two-level impurities such as paramagnetic ions on the phonon spectrum of a crystal, and the nuclear single-phonon coherent scattering of the neutrons. The simplest interaction, which is linear in the phonon operators and bilinear in the fermion operators, is used in a model Hamiltonian, in which only the terms that cause resonant scattering of the phonons are retained. It is shown that two-level defects of low concentration can noticeably change the shape of the line of the nuclear single-phonon coherent neutron scattering. The neutrons may become scattered with excitation of bound spin-phonon states, leading to two peaks in the scattered-neutron line. The interaction (exchange or dipole-dipole) between impurities can broaden the resonant level, thus reducing the cross section for the

resonant scattering of the phonons. During the time of collision, the interaction between two-level impurities can cause an exchange of energy between the particular defect and the remaining defects. TITLE: Long-lived interaction between paramagnetic ions induced by phonons

SOURCE: AN LatSSR. Izvestiya. Seriya fizicheskikh i tekhnicheskikh nauk, no. 4, 1966, 22-24

TOPIC TAGS: ion interaction, paramagnetic ion, phonon spectrum, phonon exchange, resonance line, correlation function, anisotropy, paramagnetic resonance

ABSTRACT: Using the Lee model at absolute zero temperature an exact solution of the problem has been found for the case of two-spin correlation function by phonon exchange. The exchange has been found to widen and shift the paramagnetic resonance line. The role of anisotropy in the phonon spectrum has been discussed. Orig. art. has: 4 formulas. AUTHOR: Iolko, M.V.

TITLE: Influence of Some Factors on the Operating Indices of Converters for Bessemerizing Copper and Copper-nickel Mattes (Vliyaniye nekotorykh faktorov na pokazateli raboty konverterov dlya bessemerovaniya mednykh i medno-nikelevykh shteynov)

PERIODICAL: Tsvetnyye Metally, 1959, Nr 3, pp 19 - 22 (USSR)

ABSTRACT: The author considers the main factors influencing the productivity and economics of the converter process in the light of some recommendations made in recent articles. He discusses first the article by L.M. Shalygin in Tsvetnyye Metally, 1955, Nr 5. He discounts the proposals of that author that blast pressure and slag temperature should be increased, considering 0.7-0.8 atm and 1 150 °C sufficient. The author recalls his own recommendations in favour of a converter with a 1.8 x 1.8 m top and on the general dimensions of the converter (published in the Byulleten Soyuznikel'olovoprojekta", 1936, Nr 6). He considers that the maximal quantity of working tuyeres should

Card1/2

Influence of Some Factors on the Operating Indices of Converters for
Bessemerizing Copper and Copper-nickel Mattes

be provided and the throat made as large as possible.
On the basis of the work at the Gintsvetmet in 1932-1934
and the experiments of P.S. Kusakina and N.P. Diyeva
(1950-1951) the author recommends the use of oxygen-
enriched air. An oxygen plant has been completed at the
Balkhashskiy medel'plavil'nyy zavod (Balkhash Copper-
smelting Works) and tests of this technique will shortly
be carried out.

TITLE: Theory of Caterpillar Drive. Guiding Sprocket.
(Teoriya gusenichnogo privoda. Napravlyayushchaya zvezdochka).

PERIODICAL: Nauch. tr. Novocherkas. politekh. in-t, 1955, 30,
63-82. (USSR)

ABSTRACT: The slip of chain from the guiding sprocket is analyzed. The relative positions of chain links and sprocket are shown in several diagrams. The moments of slip are analyzed in the initial and final positions of the roller. Each relative position is graphically recorded in geometrical values in the form of equations. In the solution of these equations the correlations of the links length, the peripheral speed of the sprocket and, the dependance of cranks on the parameters of the leading and guiding sprockets were obtained. It was determined that the cycle of slipping-off the chain from the guiding sprocket must begin before the running-on cycle in the leading sprocket. The analysis of changes in speed

Card 1/2

123 - 1 - 123

of a guiding sprocket is shown in graphs and numerous tables. The process of a running-off chain is theoretically analyzed, and graphically represented; the analytical dependencies and computation tables of dimensions are given. Requirements for the design of drives with one and two pull chains are given. It is also indicated that the length of driving chains, should consist of an even number of links with an even number of teeth in the sprocket. Thirty drawings and 4 bibliographical references are given. (The beginning of the discussion - see Trudy Novocherkasskogo politekhnicheskogo instituta, 1948,XX).

TITLE: Method of measuring the diffusion coefficients of solid substances in compressed gases

PERIODICAL: Inzhenerno-fizicheskii zhurnal, v. 5, no. 2, 1962, 24 - 29

TEXT: In the method described here, the rate of diffusion of a solid in a gas is determined from its loss of weight, and no analyses are carried out. The diffusion chamber is made of stainless steel (Fig. 1) and consists of a vessel, a screw, and a valve. The cylindrical channel is 10.0 ± 0.1 mm in diameter and 71.0 ± 0.1 mm in length. The channel is filled with round rods (10) made of calibrated iron wire and 0.5 and 0.8 mm in diameter. A tablet (9) of solid, pressed analytical purity diphenyl amine (m. p. 50°C) is placed at the bottom of the channel. A gaseous solution saturated with diphenyl amide is formed on the surface of the tablet by introducing carbon dioxide through the valve. The diphenyl amide diffuses into the capillaries between the rods. Prior to the experiment, the tablet was ground to fit the steel socket. The diffusion chamber with

Card 1/3

Method of measuring the ...

S/170/62/005/002/001/009
B104/B138

the socket and tablet inside was evacuated at room temperature and put into a thermostat. After the desired temperature had been reached, the required pressure was created in the chamber with a hydraulic press. The diffusion coefficient of the diphenyl amine was calculated from an equation derived from Fick's second equation by integration. It was assumed to be independent of the composition (Jost W., Diffusion in Solids, Liquids and Gases. New York, 1952). The experiments were made at 32.3°C and at pressures varying from 130.5 to 77.0 at, and took 5 min to 50 hrs. In the pressure range under consideration, the diffusion coefficient varied almost linearly from $0.6 \cdot 10^{-4} \text{ cm}^2 \cdot \text{sec}^{-1}$ to $1.9 \cdot 10^{-4} \text{ cm}^2 \cdot \text{sec}^{-1}$. The error was 5 - 10%. I. R. Krichevskiy is thanked for advice and interest. There are 3 figures, 1 table, and 22 references: 10 Soviet and 12 non-Soviet. TITLE:

An integration method for the equation of the fuselage in the vortex interpretation of the theory of functions of a complex variable

PERIODICAL: Akademiya nauk Uzbekskoy SSR. Izvestiya. Seriya fiziko-matematicheskikh nauk, no. 4, 1962, 33 - 37

TEXT: This is a note to I. S. Arzhanykh's theory of functions of a complex variable, in which each analytical function $f(\xi) = \varphi + i\psi$ is associated with a three-dimensional vortex flow of an ideal incompressible fluid (DAN SSSR, 1950, v. 73, no. 4). The surface of this flow is determined by the wing $\gamma = a = \text{const.}$, and by the fuselage $z = \gamma(x, y)$ which satisfies the equation

$$\frac{D}{D(x, y)} \left[\frac{D(\gamma, \gamma)}{D(x, y)}, \gamma \right] = 0.$$

Arzhanykh derived a very complicated fourth-order partial differential equation for the function γ . In the present paper, a third-order quasi-
